

Main features in VirtaMove 8.0.0

- Source agent VSS snapshot stored on the biggest drive on the source
- Maestro: instantiation and management of destinations machines in AWS/Azure clouds
- Maestro: Ability to add applications in monitor state not present in add/remove programs of source machine
- Maestro: Performance improvements
- Internal rebranding from AppZero to VirtaMove (paths, registries, service declarations, xml tags, etc)

Resolved Issues or small features in VirtaMove 8.0.0

19282	Source Agent hangs without responding to any request whether migration related or maestro related. Maestro exhausting all thread queues
18876	Prevent the installation of source agent when core is already installed
18904	Pre-populate is not enabled event if a task is selected
19338	Maestro: General slowness with Maestro due to long DB queries
19335	No warning is given for larger source drive on precheck
19296	Uninstaller should not consider a fatal failure if not able to find the security key
19154	Maestro/Agents: Filter out system root folders from paths being monitored
19279	Maestro: filter for applications that cannot be monitored. Special treatment
19231	Missing registry key detection and automatic temp file cleanup for SQLRehostScript
19277	Maestro: An application shows lots of CPU activity yet no progress on monitoring
19259	Failure to synchronize IIS ISAPI
17876	Cache launch menu information for subsequent calls
18238	Detect VSS is not available on the source machine and flag it in the system
19142	COM+ Multiple users in a role
19040	Seamless approach to install or uninstall the source agent either through virtaagentinstall or it MSI
19095	Agent un-intallation should handle runtime libraries so that the agent can be reinstalled/upgraded when intercepts are loaded
19214	Appztethermonitor to flag and highlight all errors during live tethering
19059	Special treatment on the destination machine when antivirus is detected
18138	Uncompress percentage/progress
18745	Undock breakdown in virtamgr same as in dock, dissolve, compress
19050	Ability to read/export/create security key through virtamgr
18345	"Failed to dock appliance" Failed to query services
18766	Use a filter file to exclude processes from being injected with monitor DLLs
