

V-MAESTRO

Migration Intelligence at Your Fingertips

ORCHESTRATE YOUR MIGRATIONS

V-Maestro's graphical user interface gives you what no other software today can provide: immediate and complete visibility of the servers and the apps running across your network, so you can be the conductor of your migration projects for legacy Windows Server applications.

Start with a view of your source servers. Now, get ready to orchestrate. Turn on monitoring for specific servers, discover who's using which application and how. You're discovering your mission-critical applications and identifying the defunct or unused applications that aren't worth your attention. Select applications or exclude specific applications from migration, check out real-time monitoring and capacity planning reports. Assign resources to specific migration groups.

When you're ready to migrate, you'll be able to proceed knowing that you're migrating only what you need, based on insightful capacity planning, and that dependencies haven't been left behind to cause issues during testing.

Monitor. Manage. Migrate. It's time to move, the smart way.
